# NO REFLECTIONS ON YOU!

## with the SDC Antiglare Screen

- The CRT of many computers and terminals is highly reflective. Overhead lighting, windows, clothing and jewelry are mirrored toward the eyes of the user. Eye strain and fatigue often result from prolonged exposure to these reflections.
- The National Institute of Occupational Safety and Health reports that visual problems are one of the most frequently cited health concerns related to the use of the computer terminals. NIOSH reports that one of the most effective means of reducing health hazards and enhancing user comfort is to install a glare shield.
- The Antiglare Screen from Screen Data Corporation has been judged by an independent insurance company study to be the best solution tested to eliminate glare. Factors considered were user productivity, reduction of fatigue, ease of cleaning, durability, adaptability and cost.

The Antiglare Screen is not glass or plexiglass but a finely woven mesh of tough synthetic material. The mesh passes the text and graphics information from the CRT through to the eyes while stop-

ping light from other sources from reflecting back to you. At the same time, the appearance of the display is enhanced because characters appear against a dark rather than a light background.

- The Antiglare Screen attaches with small Velcro buttons to the outside of the display. It can be removed in a moment.
- See our advertisements in leading computer magazines.
- Antiglare Screens are available for all popular monitors. Try one! It carries a 30 day money back guarantee. See reverse side for sizes and prices.
